

Temperature sensors for heat and cooling meters

Temperature sensor pairs with platinum precision resistance for combination with all standard calculators in measuring points for the consumption of heat and cooling energy

Temperature sensor pairs serve to determine the supply and return temperature in closed water circults in heating and cooling systems. Depending on the measuring point requirements they can be installed in a sleeve for temperature sensor or directly in the heat carrier.

In so-called split heat meters they are connected to an electronic calculator together iwith a flow sensor. For special installation situations and/or large distances between the temperature sensor installation point and the calculator special cable lengths and versions with four-wire connection head are available.

All the versions have an MID type testing certificate in accordance with guideline 2014/32/EU and are supplied with a corresponding conformity assessment. Some selected versions also have a domestic type test certificate for cold metering in Germany and a conformity assessment in accordance with the PTD technical guideline K 7.2 PTB. Thus these versions can be used universally for heat and cold metering and therefore offer a substantial logistical advantage. A new kind of temperature sensor type 'Universal 6 x 60 -230' that can be used for all standard sleeves for temperature sensors with an installation length of 50 to 210 mm and an internal diameter of 6 mm. Example: Type DS 27.5

Example: Type universal 6 x 60 - 230

Overview for versions with measurement resistance Pt 500

Temperature range: 0 to 150 °C

Version	Diameter (mm)	Installation length (mm)	Cable length (mm)	Fitting sleeve for tempera- ture sensor (mm)	Order no.
	5	45	3		118686
PSC	5	45	10		124763
(Pocket Short Cable)	5.2	45	3		119227
	6	50	3		124765
DS (Direct Short) 27.5		27.5	1.5		120504
for heat and cold measurement		27.5	5		124129
DS (Direct Short) 38 for heating and cooling measurement		38	1.5		120503
		38	5		141652
Universal 6 x 60 - 230 for heat and cold measurement, suitable for: Sleeves for temperature sensors 85, 120 and 210 mm	6	60 to 230	3	50 to 210	156295
with clamping screw Sleeves for temperature sensors 100 and 150 mm with ¼"inner thread Installation points for temperature sensor type 'DS6'	6	60 to 230	10	50 to 210	156296

Temperature sensor pairs as version with measurement resistance Pt 100 are available on request

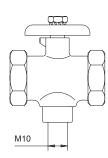

The range is rounded off with installation accessories such as special ball valves with temperaure sensor mounting M10x1 and stainless steel sleeves for temperature sensors in various lengths.

The ball valve with drill bore M10x1 is ideally suited to the installation of direct sensors. If the ball valve is closed then the temperature sensor can be exchanged without draining the heating water. When open the sensor is surrounded by the heat carrier and can react quickly and reliably to changes in temperature. Ball valves wihtout a temperature sensor mounting are available for shut off purposes.

Description	Size	Order no.
	IG 1⁄2"	100531
Ball valve	IG 3⁄4"	100533
with temperature sensor mounting	IG 1"	102170
M10x1	IG 1¼"	115831
	IG 1½"	107330

Example: Ball valve with inner thread 1/2"

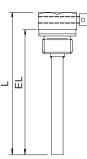

The stainless steel sleeves for temperature sensors are suitable for temperature sensors with an external diameter of 6 mm and a length from 105 mm and for the type 'Universal 6 x 60 - 230".

When new measuring points are designed they are generally used from a nominal flow of $q_p 10 \text{ m}^3/\text{h}.$

Version	Installation length EL (mm)	Order no.
Stainless steel with ½"connection	85	110549
thread and side clamping screw,	120	110550
including copper seal	210	112702

Example:

Stainless steel sleeve for temperature sensor with installation length 85 mm and 120 mm with side clamping screw
